SUMMARY

Python-focused developer building financial risk applications in technology consulting. Shipped an RBI-compliant credit-risk platform to production for a banking client, with hands-on experience across Python, SQL, Flask REST APIs, and Docker-based on-premises deployment. Keen to build modular, efficient applications at the intersection of technology, financial data, and portfolio analytics.

EXPERIENCE

- Grant Thornton Bharat** Feb 2025 – Present
 - Senior Associate, Technology Consulting (started as Summer Trainee)*
 - Shipped an RBI-compliant Expected Credit Loss (ECL) platform – an in-house credit-risk product now being rolled out to further clients – to production for a banking client, owning the backend and data layer end-to-end; deployed on-premises across Linux servers using Docker containers.
 - Built data-ingestion and validation pipelines delivering clean, consistent loan data for credit-risk computations, engineered for repeatable and consistent execution across runs.
 - Supported the platform's go-live by hardening backend stability, validating data accuracy, and enforcing regulatory compliance.
 - Architected RESTful APIs in Python and Flask connecting front-end interfaces to core business logic and database systems, exposing 200+ endpoints across 30+ services.
 - Developed backend systems in Python, SQL, and Flask for an internal Early Warning Signal (EWS) financial-risk-monitoring application, building the data-ingestion and signal-computation logic.
 - Conducted market research and price-discovery analysis of cybersecurity vendors for a banking client, evaluating 50+ vendors on capability and pricing to inform procurement strategy.
 - Partnered with consulting teams to translate business requirements into modular, scalable solutions deployable across multiple environments.
- Boeing** Jun 2024 – Jul 2024
 - Systems Service Engineer Intern*
 - Helped initiate an internal Flask-based web application that indexed all damage and issue categories into a searchable catalog, streamlining maintenance workflows.
 - Analyzed maintenance data and generated reports for resolving issues and supporting operational decisions.
- General Electric Power** Jul 2023
 - Industrial Trainee*
 - Analyzed hydroelectric and pumped-storage operations from real-time telemetry, studying performance metrics and predictive-maintenance practices.

TECHNICAL SKILLS

- **Languages & Data:** Python, SQL, Pandas, NumPy, Data Analysis, Data Visualization, Advanced Excel, BI Tools
- **Backend & Infrastructure:** Flask, REST APIs, Docker, Linux, Git, Jupyter, MATLAB/Simulink
- **Finance Domain:** Financial Risk Management, Expected Credit Loss (ECL), RBI Regulatory Compliance, Market Research, Business & Stakeholder Analysis

PROJECTS

- **Real Estate Price Prediction Model:** Built regression models in Python and scikit-learn to predict property prices, applying feature engineering to improve accuracy.
- **IR-Based Digital Tachometer:** Developed an Arduino system with Python logging for RPM analysis and signal-processing improvements.
- **IoT Plant Watering System:** Designed a sensor-based automated irrigation system with real-time monitoring.

EDUCATION

- **Manipal Institute of Technology, Udupi** — *B.Tech EEE, Minor in Data Science (CGPA: 7.19)* 2021 – 2025
- **Amity International School, Saket, Delhi** — *Class XII, 94.8%* 2021
- **Amity International School, Gurugram** — *Class X, 94%* 2019

CERTIFICATIONS & LEADERSHIP

- **Certifications:** Python for Data Science, AI and Development (IBM); SQL for Data Science (UC Davis); Financial Markets (Yale University) – all via Coursera
- **Leadership:** Treasurer & Technical Head, IE EnE (Manipal) – organized workshops, site visits, and chapter finances; Management Committee, Research Society Manipal; Organizer, Techatva technical fest
